

Spatial Temporal Activity Recorder (STAR)

How to export mapped features

Export mapped STAR features to shapefiles, CSV files, XLSX files

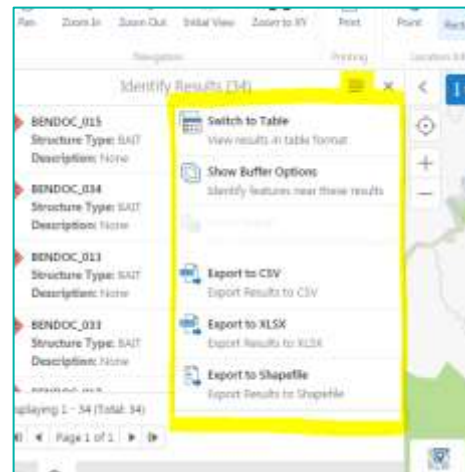

Context: Features can be drawn in STAR Map and stored against a program, project or zone. Features are spatial point, line or polygon records, with attached aspatial data relating to the program, project or zone.

To export features from STAR, navigate to the Map and use the 'Rectangle Location Info' tool to draw a rectangle around the features you want to export. Can include multiple point, line and polygon features. These selected features will then appear in the 'Identify Results' side panel.

Press the 'Panel Actions Menu' button  and menu will drop down.

Press either 'Export to CSV', 'Export to XLSX' or 'Export to Shapefile'

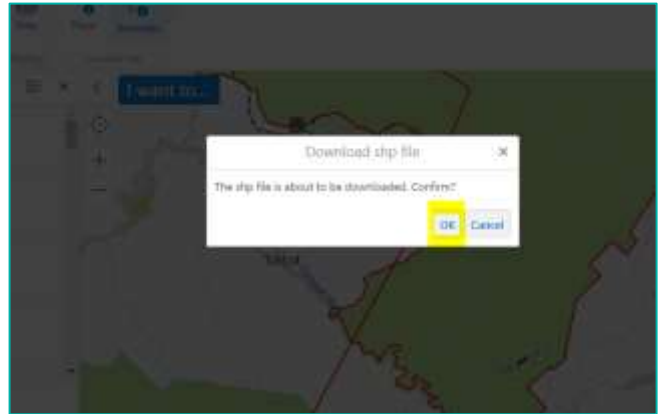

How to export mapped features

Message box appears, click 'OK' and save to your directory.

Note: When exporting Shapefiles and CSV files, all features in the 'Identify Results' panel (all 34 features in this example) will be exported as separate shapfiles (point, line and polygon) collated in a zip file.

When exporting XLSX files only the first feature in the 'Identify Results' list will export as a single XLSX file (limitation of GeoCortex software). If you need to export multiple features to XLSX files, may be best to export them all as CSV files and then convert them to XLSX files in Microsoft Excel.
