

# Revegetation species with indicative demand over coming years

The BushBank Program seeks to support projects that focus on species in demand that are well suited to large-scale habitat restoration. For example, Table 1 lists the species that are likely to be needed by the BushBank program over the coming years and an indication of demand. Other large-scale restoration projects typically require similar species, but this list is not exhaustive and may not cover all parts of Victoria.

Table 1. List of species currently in demand for large-scale restoration projects
