

VBA Sensitive Species

The restricted species list of the Victorian Biodiversity Atlas

The VBA contains observation records of threatened and non-threatened species occurring in Victoria.

While the majority of these data are publicly accessible, some have restricted viewing rights so the precise location is denatured to order to protect the species or populations from accidental or intended harm (such as illegal taking or habitat destruction). These data, deemed "restricted access", are made available to decision makers to ensure that these sites are protected during land use planning. These "restricted access" records have more stringent usage conditions as defined in the VBA Terms & Conditions of Use.

Access to the full species list and the main attributes is available via the VBA application. You can log in as a Guest and under the Search menu there is the option to Download Species Checklist.

The list of taxa currently deemed "restricted" are shown below.
