

First Name

Michael

Last Name

Strickland

What organisation are you from?

WM Waste Management Services

What do you think are the best value actions listed in the statement that are likely to help improve future air quality?

Reducing the occurrence of air pollution

How would you build on or vary these actions?

Encourage the use of electric powered vehicles including trucks and buses to be used instead of diesel or petrol vehicles. The use of electric vehicles instead of fossil fuel powered vehicles would reduce all the pollutants listed in the Air Quality Statement, plus greenhouse gas emissions. Electric trucks also reduce noise generation. Electric trucks are more expensive to buy than standard trucks. The Victorian Government could reduce registration and stamp duty costs for electric vehicles.

Do you have any suggestions for further actions?

Are there any air quality actions you believe should be avoided? Why?

Are there particular areas of air quality (either pollution sources or geographic regions) you think the government should target for improvement? Why?

Are you able to provide any data or information that will help government assess the feasibility and cost-effectiveness of air quality management actions?

Do you have other suggestions on how to secure a clean air future?
