

2017 Regent Honeyeater Captive Release & Community Monitoring Project – Update #22 4 Dec. 2017

Hi everyone (Regent Honeyeater email group)
2017 Captive Release & Community Monitoring Project - Update #22 (Day 236 - end of week 34 - post release report)

Regents gone walkabout

- We're still monitoring a pair of nesting Regents in Wangaratta
- One of the two birds with working transmitters is still being periodically detected in farm land towards Mt. Pilot
- But it appears that all other Regents have moved beyond the park boundary.

Celebration Dinner

The incredible contribution of all volunteers was celebrated in style recently.

The project team gave special recognition and thanks to the following:

250+ volunteer hours: Lyn, Richard & Bill

Please contact us if you have any queries,
Cheers Glen, Dean, & Liz
 (2017 Regent Honeyeater Community Monitoring Project Coordinating Team)

100+ volunteer hours: Mick, Karen & Neville

50+ volunteer hours: Greg, Janet and John

Thanks & Farewell

- Gem has moved back to Melbourne to continue her Regent PhD write-up &
- Dave has moved to Sydney following completion of his BirdLife Australia internship - having volunteered his time over the last eight months.

We are incredibly indebted to Liz, Gem & Dave who coordinated volunteers, curated data and maintained tracking equipment - including countless after-hours work while housed together in our Chiltern "office".

Spot a Regent in the meantime?

Please let us know **ASAP** if you spot any or hear of Regent observations (so we can follow-up to check for further birds etc.). Remember to check for bands with binoculars and take & forward photos where possible.
