

**First Name**

Casey

**Last Name**

Wright

**What organisation are you from?**

None

**What do you think are the best value actions listed in the statement that are likely to help improve future air quality?**

Better monitoring, strengthening EPA.

**How would you build on or vary these actions?**

Need to clearly prioritise health over business outcomes. Strong and consistent regulations are what is needed to reduce risk and improve people's lives. Business will adapt and prefer clear guidelines.

**Do you have any suggestions for further actions?**

Westgate tunnel must have filtration to remove dangerous emissions from concentrated truck use. Expand restrictions on local streets for trucks in inner west on Williamstown and Millers roads. All trucks must use Westgate freeway at all times and container storage yards moved to old flower market site to reduce need for trucks to move containers via local streets.

**Are there any air quality actions you believe should be avoided? Why?**

Allowing business interests to be prioritised over people's health.

**Are there particular areas of air quality (either pollution sources or geographic regions) you think the government should target for improvement? Why?**

Truck age and performance. Need to improve requirements for air quality of older trucks and incentivise business to upgrade trucks or retro fit emission controls.

**Are you able to provide any data or information that will help government assess the feasibility and cost-effectiveness of air quality management actions?****Do you have other suggestions on how to secure a clean air future?**

See above comments. Basically put people's health above business interests. Business will adapt.
